

# Number Portability (NP) and ENUM

**Do you need a stable, secure, flexible and cost effective NP system?**

Quadon™ NP system offers the most reliable, secure and advanced number portability solution to answer the highest customer, operator and regulator's demands. With modular, scalable and high availability design it offers easy service upgrades, maintenance and scalability, and delivers the highest service quality for all stakeholders. Quadon™ NP is efficient and cost effecting number portability solution.

Teletech Quadon™ NP also provides ENUM and LLU applications and services, which makes it unique on the market. As one of the pioneers in the field, Teletech has incorporated these functionalities into Quadon™ NP, a world leading number portability solution.

**Do you need a reliable and experienced partner for number portability and national telecommunication market regulations?**

Quadon™ number portability is a proven and a world leading number portability and ENUM solution. Our team of professionals supports you with the knowledge and experience and helps you establish regulatory and legal foundations for number portability. Quadon™ NP system is a fast and safe way to successful and well regulated telecommunication market in your country.

Voice of a customer:

Tomaž Simonič, Managing director, APEK Republic of Slovenia (August 2009):

“After successful four years of production operation of number portability in Slovenia, Teletech d.o.o. has proven to be the right choice for the number portability service provider. Quadon is a very efficient, secure and reliable fixed and mobile number portability system. With its flexible and open design we are able to instantly introduce new advanced services that help us properly and very efficiently regulate national telecommunication market in Slovenia. “

Quadon™ NP solution alleviates and optimizes the process for all involved parties. For the consumer, the process is friendly, fast and transparent. For the communication carrier, the process is easy to install, it minimizes the required resources and costs and is easy to implement and automate. Finally, for the regulator, the process is easy to manage with maximal customization level, out-of-the-box consumer oriented, friendly, safe, reliable and transparent solution.

Many consumers, especially businesses are reluctant to change the communication carrier if they have to suffer the costs and especially the inconvenience of changing a telephone number. The main advantage of the mobile phone portability is a free choice –unsatisfied consumer can change the communication provider and keep the phone number.

**Telecommunication market becomes more competitive and attractive for investors.**

### Teletech's Quadon™ is "one stop shop" for a consumer.

In order to change the communication provider and keep the phone number, the consumer just pays a visit to his new communication provider and the whole process of porting a number is initiated and administrated by the recipient on behalf of the consumer.

Watch and analyze your telecommunication market with extensive and fully customizable reporting and monitoring systems.

### Quadon™ NP systems are designed from highest demands in telecommunication sector.

The system is reliable and offers more than 99,999% service up time. The system is scalable and can be extended with additional resources when needed. Quadon™ NP system has a modular and a very flexible architecture. New services like LLU, ENUM and user ENUM can be easily added to the platform without affecting existing production services.

### Quadon™ follows best practices of NP Clearing House design

- **Reliable NP service**

- “Five nines” design from highest telecom. standards and demands.

- **Secure**

- Secure communication lines and protocols

- **Data safety and consistency**

- Geographically dislocated databases, built-in data cons. algorithms

- **Modular architecture based on open standards**

- Advanced LLU and ENUM modules.

- **Easy to integrate and maintain**

- All-in-the-box and short time to market NP and ENUM solution.
